Surgical and Bloodwork Consent

Client: _____

Patient: _____

Today's Best Contact #: _____

I am the owner or agent for the owner of the above described animal and have the authority to execute this consent. I hereby consent and authorize the performance of the following procedure(s) and or operation(s):

I also authorize the use of appropriate anesthetics, and other medication, and I understand that hospital support personnel will be employed as deemed necessary by the veterinarian. I have been advised to the nature of the procedures or operations and the risks involved. I realize that results cannot be guaranteed. I have read and understand this authorization and consent.

Your pet is scheduled for a procedure that requires anesthesia. We would like to take this opportunity to recommend **PREANESTHETIC BLOOD TESTING** and explain why it is important to the health of your pet.

Like you, our greatest concern is the well being of your pet. Before placing your pet under anesthesia, a veterinarian will perform a complete physical examination to identify any existing medical conditions that could complicate the procedure and compromise the health of your pet.

Because there is always the possibility a physical exam alone will not identify all of your pet's health problems, we strongly recommend a pre-anesthetic profile (a combination of tests) be performed prior to anesthesia. The tests we recommend are similar to and equally as important as those your own physician would run if you were to undergo anesthesia.

It is important to understand that a pre-anesthetic profile does not guarantee the absence of anesthetic complications. It may, however, greatly reduce the risk of complications as well as identify medical conditions that could require medical treatment in the future.

The combination of blood tests we recommend for pets 6 years old and under:

Albumin, ALKP, ALT, BUN, Creatinine, Glucose, Total Protein, Electrolytes

The combination of blood tests we recommend for pets *over* 6 years old:

Albumin, ALKP, ALT, BUN, Creatinine, Glucose, Total Protein, Electrolytes,
GGT, Cholesterol, Total Bilirubin, Phosphorus, Calcium, Amylase, Lipase, CBC

Please complete the recommended testing prior to administering anesthesia to my pet.
